

# PushCatch Liver Detox | QuickSilver Scientific

---

The PushCatch™ LiverDetox is a versatile two-step cleansing protocol designed to support the elimination of toxins while minimizing their redistribution and reabsorption.

Liver detoxification is essential for proper health, but improperly designed protocols can result in toxin redistribution, not elimination. Our elegant and powerful

formulation and delivery chemistry derive from Dr. Shade's extensive research into detoxification pathways.

His specialized “push and catch” system pushes toxins with a liposomal blend of bitters buttressed by powerful antioxidant support. The catch captures toxins in the gut with a broad- spectrum constellation of binders that are blended with uniquely soothing prebiotic fibers. The toxins can then be safely eliminated by the body. This system is highly flexible and can be used as a gentle, daily standalone detox, or as an intensive program.

## **The PushCatch™ LiverDetox integrates two unique Quicksilver Scientific products:**

**Dr. Shade's Liver Sauce™:** A premier liver support combination that simultaneously supports all phases of detoxification and toxin elimination. Contains a blend of four classic drainage botanicals with a potent effect on bitter receptors, along with a synergistic medley of powerful phytonutrients to control inflammatory response and support the organ's detoxification.

**UltraBinder™:** A comprehensive, broad-spectrum binder that works across the gut to intercept and neutralize an array of toxins. Because binders can be constipating, soothing and utilizing acacia gum and aloe vera are included in the blend

## **Optional:**

### **Liposomal Glutathione**

Glutathione is the master detoxifier and the body's main endogenous antioxidant. \* Toxins are linked to glutathione, which then carries them into the bile and the stool, and out of the body. Glutathione protects our cells' delicate chemical machinery and helps energy metabolism run efficiently. \* Glutathione is also integral to our immune system, especially for resistance to viruses. \*

Typical oral delivery of glutathione is greatly inhibited by breakdown in the stomach. **Quicksilver Delivery Systems™** protects glutathione from breakdown in the digestive system that otherwise prevents absorption of oral glutathione supplementation. \* In addition to greatly improving bioavailability, the liposomal delivery format enables intracellular delivery of glutathione. In cell cultures, liposomal glutathione has been demonstrated to be 100 times more efficiency for intracellular delivery than non-liposomal glutathione.
